1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-7, drawn to an antenna array system.
  - II. Claims 8-1, drawn to drawn to an antenna array system.
2. Inventions group 1 and group 2 are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention of group 2 has separate utility such as in a system without a controller coupled to the antenna elements, the controller determining a magnitude and phase relationship, and the controller employing the magnitude and phase relationship to compute a projected signal sample for a virtual antenna element.
3. Inventions group 1 and group 2 are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention group 1 has separate utility such as in a system without a plurality of arrays of patch antennas arranged in rows and columns, and a multi-element digital beamformer phasing signals from each of plurality of arrays to a single point.
4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
